INSTRUCTIONS FOR USING MSD SUPPLIED GIS FILESIN AutoCAD DRAWING FILE (dwg) FORMAT

All LOJIC data have the following projection characteristics:

Projection: Kentucky State Plane North Zone: 3976 Datum: NAD83 Units: Feet Spheroid: GRS1980

You are being supplied with data from MSD/LOJIC. The .dwg file contains all exported LOJIC layers combined together into a single file that can be used directly with AutoCAD Release 2004 and later.

The data in the .dwg file has a line type scale set to 1. Change everything to BYLAYER.

You are being supplied with the msd2003.shx and the renlayer.lsp files.

- The msd2003.shx file contains the shape definitions used by the complex linetypes and <u>must</u> be in the ACAD font directory or in the environment support path. <u>If you are using Release 14 or newer</u>, copy the complex linestyle shape definition file (msd2003.shx) to the AutoCAD fonts directory, or better yet, a directory on your AutoCAD support environment search path (SET ACAD=...). This file is necessary so that complex linetypes can be used instead of multiple entities as in prior versions. This allows entities, such as fence lines, to be symbolized as a single entity as opposed to multiple lines with an "X" block spaced periodically.
- 2) The "renlayer.lsp" routine will rename the default layer names from ARC/INFO into more recognizable names. To use the routine type use the LOAD command at the AutoCAD Command: prompt. To execute the routine, type in **renlayer**. To change the layer names back to the default values, simply execute the routine again.

HELPFUL HINTS

If the total area is broken into sections, it is advised that you create a drawing for each area. Later you may combine them by using the insert command in AutoCAD with the "*" option and inserting them at coordinate 0,0 with no rotation.

If you have any questions or problems with the use of this .dwg file, contact Jane Poole at the LOJIC at (502) 540-6435.
